Patent NO. 6605709

GENERAL INFORMATION:

APPLICANT: GARY BRETON

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.1002-001

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT APPLICATION NUMBER: US 60/128,706

PRIOR APPLICATION NUMBER: US 60/128,706

Sequence 41841, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 41841
LENGTH: 142
TYPE: PAT
ORGANISM: Drosophila melanogaster
FEATURE:
OTHER INFORMATION: Xaa means any amino acid
US-09-270-767-41841
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ; TYPE: PRT

New polymucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.

Claim 20; SEQ ID NO 1078; 1177pp; English.

The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially

The sequence is that of a protein which can be used in the preparation of C the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, CR B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a C BARD1, B123, BE2, BE14, BE31 or BE445 mucleic acid sequence, specifically C a wild type BARD1 composition for the detection or purification of BRCA1, C useful to identify a patient having, or at risk of developing cancer. C BARD1 can be used in the preparation of an anti-BARD1 antibody, and in C the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to antibody can be used to identify a patient having or at risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
